

## D. Lean construction curriculum in university courses

Professors Sagata Bhawani (California State University, Fresno/USA) and Thais Alves (San Diego State University) are doing on a project funded by LCI-USA to map learning resources to support integration of Lean education into existing design and construction curriculum being offered by US Universities. LCI-USA has agreed to share what they produce with all other national LCIs.

- The project is led by Sagata and she recently presented a paper about this topic in the 2024 Associated Schools of Construction (ASC) conference. The paper can be found here: <https://easychair.org/publications/paper/s7fwH>
- Sagata and Thais continue to work on this project by matching relevant topics related to Lean Construction (LC) with freely available resources (e.g., articles, reports, simulations, etc.) in three different levels: modules within a course, an entire course, and program-level (multiple courses/topics within a major) teaching.
